WORK EXPERIENCE

Doctegrity   **Jul 2023- Today**

As a full stack developer, my job consists of the implementation of the system that manages the control of the companies that use the platform for the telemedicine service of their members in Ruby on Rails. I developed the new version of the Lifevitals system in Angular 18, Android and IOS. This system scans the members' faces and displays the patient's medical indicators.

Consultec TI   **Jan 2021- Feb 2024**

As a team lead for this online banking/Fintech company, I am in charge of distributing the tasks among the team members, coordinating the work, defining the guidelines to follow as well as managing the times of previously defined deliverables. I was in charge of supervising/leading the frontend team with 6 members including me. As part of my duties, I also develop new modules or adjust the existing ones of the Omnibanca product using Angular 7/16 and Spring Boot (Java) technologies.

Global Groups Technologies   **Jan 2019- Dec 2020**

As a full stack developer in this company, my job was to implement improvements to the platform authentication module in NetCore 3.1 with C#. Make the changes to the frontend in the same way with Angular 6/7/8. As part of the tasks, I also had to inspect and adjust store procedures according to the needs of the necessary responses.

EtyaLab   **Jun 2019- Dec 2019**

As a team leader in this Software Factory, I was in charge of distributing tasks among team members, coordinating the work, defining the guidelines to follow as well as managing the times of previously defined deliverables in the different projects developed by the company.
I was in charge of 5 projects at the same time from different industries. As part of the tasks I also had to Develop/Maintain hybrid and native applications for mobile devices in Ionic, React Native, Java and Kotlin technologies.
Develop/Maintain scalable, simple and maintainable applications in React JS.

GRUPO ADVISERS SA   **Feb 2019- Jun 2019**

As Frontend developer I was in charge to develop a mobile application with hybrid technology such as Ionic 2 for vote counting in the 2020 Panama elections and also develop the same version using IOS with Swift language for vote counting in the 2020 Panama elections for PRD political party. In addition to this, I had to implement/maintain the Be You mobile application to distribute points in stores in the Stevens chain, generating profits of up to $100K per establishment. On the other hand, my main task was the development of the new frontend features of the Retail Boss point of sale for the Costo chains in Panama.

Pineapple Technologies Corp   **Mar 2018- Feb 2019**

As Fullstack developer my role was based on development of features based on PHP language with Yii v1.0 and Laravel frameworks. Development of a business analysis portal, which allows joining different data sources, analyzing them and presenting an analysis of these through reports and dashboards, based on JS technologies such as Angular 4/5 for Little Caesar chain. On the other hand, it had to implement the new features and maintain the existing ones of the company's point of sale (Invu POS), deployed in an average of +200 retail establishments, fast food and restaurants mainly.

CUJAE - UTH   **Mar 2014- Jun 2017**

As a fullstack developer, my tasks were mainly focused on migrating the SIGENU system modules from Hibernate to EJB3. Implement the Rest APIs for the student mobile module in Spring Boot (Java). Implement interfaces for interaction with EJB containers using EJB3 with Java. Development of the mobile application Noote for the control of university processes throughout the country by students such as the consumption of notes and school pending in environments with low or no internet connection using Android Native (Java). Development of views, object-oriented queries and tuning of existing ones using Spring Boot and EJB3 in Java.
