Software Engineer (React / TypeScript)

Penske Truck Leasing and Logistics

2022 - Present

Allentown, PA

Penske Truck Leasing and Logistics is a premier global transportation provider that delivers essential and innovative transportation, logistics and technology services to help companies and people move forward.

- Developed and maintained **RESTful API** using **Symfony PHP** and was part of various updates to the core architecture versions.
- Experience in working with **React, RxJS, Node.js, ES6 & ES5**
- Developed, maintained, tested, analyzed performance, troubleshooting / fixing applications and applicable code
- Supported mission critical applications and assisted in the resolution of customer issues
- Used modern software tools and advocated for new ones when appropriate. Our tech stack is primarily **Next.js, Symfony, PostgreSQL, Elasticsearch, Node.js (Typescript)** microservices in **AWS Lambda, Cognito** for auth and Storybook for our in-house UI component library.
- Produced deliverables with clean, well-documented and easily maintainable code that adhered to defined coding standards
- Wrote unit / UI tests to identify defects and leveraged **CI/CD Pipelines** for building and deploying code
- Assisted in setting up production visibility tools such as Sumologic, Datadog and Fullstory.
- Designed backend database schemas
- Assigned and reviewed tasks from junior and offshore software engineers

Software Engineer, Full Stack - Growth Engineering

CloudTrucks

2020 - 2021

Remote - Project

CloudTrucks is building the operating system for trucking and is the first platform specifically designed to empower truck drivers. Our all-in-one solution optimizes and automates operations and accelerates cash-flow for drivers, so they can focus on building their business.

- Designed, tested, ship, and maintained solutions to problems and products. Working across frontend and backend
- Utilized expertise in scripting languages such as **TypeScript, JavaScript, and PHP** to deliver robust software solutions
- Collaborated with the **DevOps** team to implement and maintain **CI/CD pipelines** that incorporated security scanning and compliance checks
- Implemented authentication and authorization mechanisms, such as **OAuth 2.0** and **JWT**, ensuring compliance with relevant security standards
- Designed, developed, and optimized **SQL Queries** and database structures to support application requirements
- Architected, developed, and maintained full-stack web applications using **React** for front-end and **Symfony** for back-end development as well as multiple **Express.js** microservices.
- Developed and secured backend services and APIs
- Maintained high standards of software development and quality through unit testing, integration testing, continuous integration, and automated deployment
- Collaborated with backend engineers to define efficient **GraphQL API** contracts and ensure seamless data flow
- Optimized web performance, accessibility, and responsiveness to ensure a best-in-class user experience

Full Stack Software Engineer (React)

StubHub

2017 - 2021

New York, NY (Hybrid work)

StubHub is on a mission to redefine the live event experience on a global scale. Whether someone is looking to attend their first event or their hundredth, we're here to delight them all the way from the moment they start looking for a ticket until they step through the gate.

- Designed, developed, tested, deployed, and maintained impactful improvements across all StubHub's platforms and products, resulting in high-quality outcomes
- Tech Stack: Primarily use **React** and **React Native** front ends with **Express.js** backends, written with **Typescript**. The rest of our stack includes **MySQL, AWS (DynamoDB, Lambda, ECS, Cognito)**. We have a **Symfony + Doctrine PHP** monolith with **Twig templates**, too mostly for Admin related pages.
- Collaborated with team members to ensure best practices across our code
- Managed individual initiative priorities, deadlines, and deliverables with your technical expertise
- Mentored other team members and helped many increase their technical capabilities, fostering a culture of inclusion, results-oriented execution, open innovation, and limitless creativity
- Delivered high-quality, scalable **React, TypeScript, and SASS** code within a component-based architecture, ensuring compatibility across modern browsers
- 4+ years of experience developing high-visibility websites with modern web technologies, including **React, TypeScript, and Next.js**
- Built and deployed **Next.js** applications that prioritized performance, maintainability, and security, following modern **JavaScript** best practices
- Developed and maintained custom, reusable **React** components for a **headless CMS**-driven ecommerce platform, ensuring modularity and scalability
- Proven experience in designing and building responsive, high-performance web applications using **React, Node.js, Next.js** with **TypeScript**

Solr Search Developer

Big Dossier

2015 - 2017

Union, NJ

Big Dossier is a provider of big data management software solutions that enable access, management, sharing and distribution of data, including Big Data, across diverse enterprise platforms. With the technologies we use, we ensure to deliver an end-to-end analytics platform.

- Experience operating at scale with data search engines like **OpenSearch, Solr Search**
- Cloud Services: Major **AWS** services like **Aurora, S3, Redshift, Cloudformation, SNS, SQS**
- Architected and developed core site functionality using **Javascript (ES6+), HTML5** and **CSS3**
- Worked on a modern stack including **React, TypeScript, Node.js, and Amazon Web Services (AWS)**
- Data & Infrastructure: **MySQL, Solr Search, Apache Airflow, Apache Spark, Docker**
- Collaborated with backend engineers to design and develop **RESTful APIs**, and integrate them with frontend applications
- Designed and developed responsive, scalable, and efficient frontend applications using **React, Redux**, and other related technologies
- Languages & Frameworks: **Python, Flask, React, Typescript, Webpackt, Next.js**
- Collaborate with backend engineers to define efficient **GraphQL API** contracts and ensure seamless data flow
- Experienced working in complex **Agile, Scrum / Kanban** delivery or rapid platform development teams on time, on budget and to spec

Education

Cornell University

Bachelors of Computer Science

2011 - 2015

NYC
